St. George UT 84770

PIN 22629 Project Summary

Project Title:

St. George Trail and Bike Route Wayfinding Project

Project Description:

The City of St. George has approximately 75 miles of paved multi-use trails and 36 miles of on-street bicycle routes (111 total network miles). In 2014, the City completed a wayfinding project for paved trails, but ran out of funding prior to completing on-street bike routes. Since 2014 the paved trail network has grown dramatically, leaving much of it without wayfinding and other trail signage. Existing signs are due for replacement and updates are required for the network growth.

The City requested CRP funds from the MPO and was approved through DTAC and DTEC in January 2025.

The project is to complete a comprehensive wayfinding plan and to purchase trail signage, mounting hardware, and posts at the completion of the plan. It is intended to hire a consultant for guidance on sign programming and placement and to complete the planning portion of the project. Installation of the signs is not included in the project scope and would be completed separately during the City's existing maintenance schedules.

Estimated Project Costs :

Estimated consultant fees for wayfinding plan:	\$65,000
Estimated costs for signage/materials:	\$148,404
Total Estimated Cost:	\$213,404
